

Securitize and OTCXN Deliver First Non-Custodial End-to-End DSO Service

Leading Digital Security Offering (DSO) Primary Issuance Solution Securitize Connects to Digital Asset Trading Infrastructure Company OTCXN to bring the utility of Central Depository to the digital asset market.

San Francisco, CA – February 19, 2019 -- [Securitize](#), a leading Digital Security Offering (DSO) primary issuance and compliance platform and protocol, has announced a new strategic relationship with [OTCXN](#), a live blockchain-powered capital markets infrastructure company that enables institutional traders to trade digital assets and FX while eliminating the settlement risk inherent in traditional systems.

“OTCXN’s comprehensive, multi-custodian, secondary market trading infrastructure pipeline is a tremendous opportunity to scale the digital securities market. And, because OTCXN is in production today with other tokenized crypto assets, implementing the Securitize DS Protocol and onboarding of our customer’s digital assets will be a seamless process,” said Carlos Domingo, CEO and Co-Founder of Securitize.

OTCXN’s technology incorporates key blockchain functionality, providing cryptographically provable ownership of assets on custodial blockchain ledgers and pre-trade risk checks, representing a critical reduction in risk over the traditional centralized systems based on post-trade settlement. The OTCXN platform can be integrated with Securitize’s compliance platform to provide a seamless experience to Securitize’s customers in issuing digital securities and connecting to their investors.

“We believe the DSO market presents an immense long-term opportunity in the blockchain and digital asset space, and we are poised to be the core infrastructure provider. Our platform for secondary market trading already contains the technology pipeline required to realize the promise of this extremely important capital markets innovation,” stated Rosario M. Ingargiola, CEO and Founder of OTCXN.

OTCXN is in discussions with regulated entities that could partner with OTCXN to address potential regulatory requirements that may arise in connection with facilitating the exchange of digital securities.

Securitize’s DS Protocol for digital securities and exchanges has the highest adoption rate in the industry, powering multiple issued digital securities such as [Blockchain Capital](#), [Science Blockchain](#), [SPiCE VC](#), [22x](#), and [Augmate](#), with many more in the production pipeline.

About Securitize

[Securitize](#) is a compliance platform and protocol for issuing and managing digital securities on the blockchain, including dividends, distributions, and share buy-backs. Securitize’s innovative Digital Securities Protocol (DS Protocol) enables seamless, fully compliant trading across multiple markets

simultaneously. Securitize actively partners with exchanges, broker-dealers, custodians of crypto, escrow services, and other financial infrastructure for digital securities.

About OTCXN

OTCXN is a capital markets infrastructure company using asset digitization, proprietary blockchain technology, real-time collateral management and an array of institutional trading venues to organize global liquidity and make it tradable via a single account at any custodian on the network. OTCXN has developed the first technology platform that eliminates counterparty and settlement risk without the use of balance sheet and credit, and without becoming a counterparty to transactions.
